

Choice of blade profile and forcing profiles, manual selection of profiles of your blade

If you want all elements use the same profile, among the two laws profiles at your disposal, it is better to choose the law of constant profile, but it may be that you wish to manually select a profile for each element.

By selecting an element of the blade in the 3D interface, and clicking the right mouse button, you are accessing the context menu of the element. In this menu, you can force the angles of incidence, or the profile forms of the element:

This opens the interactive database and allows you to choose a profile for the selected element.

Once you have selected your profile, apply to the selected element clicking "Apply base profile as forced ...", HELICIEL use this profile and performance for the item to the next rebuild. See also
